OBLON, SPIVAK, MCCLELLAND MAIER & NEUSTADT, P.C. 1940 DUKE STREET ALEXANDRIA, VA 22314				
			EXAMINER AHMED, SHEEBA	
			ART UNIT 1794	PAPER NUMBER
			NOTIFICATION DATE 01/07/2008	DELIVERY MODE ELECTRONIC

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

patentdocket@oblon.com  
oblonpat@oblon.com  
jgardner@oblon.com

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	10/581,201	USHINO ET AL.	
	<b>Examiner</b>	<b>Art Unit</b>	
	Sheeba Ahmed	1794	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-8 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-8 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.
3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-3 and 5-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Saiki et al. (US 6,747,720 B2).

Saiki et al. disclose a polarizing plate provided with an optical compensation film and includes a polarizing plate, an adhesive layer A, an optical compensation film, and an adhesive layer B adhered to one another, wherein the polarizing plate comprises a polyvinyl alcohol polarizing film containing a dichroic substance (See Abstract). In one embodiment of the present invention, a transparent protective film as a protective layer may be adhered to one side or both sides of a polarizer made of a polyvinyl alcohol polarizing film including a dichroic substance, for example, via a suitable adhesive layer, such as an adhesive layer made of a vinyl alcohol polymer. The process for adhering the polarizer (polarizing film) and the protective film, that is, the transparent protective film may be conducted using, for example, an adhesive made from a vinyl alcohol polymer or an adhesive made from at least a water soluble crosslinking agent for vinyl alcohol polymer, such as boric acid,

borax, glutaraldehyde, melamine, or oxalic acid. This adhesive layer can be formed by applying and drying an aqueous solution. When preparing that aqueous solution, it is also possible to admix other additives or catalysts such as acid, when necessary. A polarizing plate according to the present invention can be used as an optical element laminated with other optical layers. There are no particular limitations regarding the optical layers, and for example it is possible to use one or two or more suitable optical layers used in the formation of liquid crystal displays or the like, such as a reflecting plate, a semitransparent reflector, a retardation plate (including half wavelength plates and quarter wavelength plates). A retardation plate or the like can be used to change linearly polarized light into elliptical or circular polarized light, to change elliptical or circular polarized light into linearly polarized light, or to change the polarization direction of linearly polarized light. Specific examples of a retardation plate include birefringent films, oriented films of a liquid crystal polymer, and films in which an oriented layer of a liquid crystal polymer is supported by the film, and such films are made by stretching a film made from polycarbonate, polyvinyl alcohol, polystyrene, polymethyl methacrylate, polypropylene, or other suitable polymers such as polyolefines, polyalylates, or polyamides. The polarizing plate of the present invention can also be made by laminating two or three or more optical layers, such as the above-described polarization separation type polarizing plate. (36) The polarizing plate and optical elements in accordance with the present invention can also be provided with an adhesive layer for adhesion with other components such as the liquid crystal cell. That adhesive layer can be made of an appropriate conventional adhesive agent, such as

an acrylic adhesive agent. It is particularly preferable that the adhesive layer has a low moisture absorption rate and excellent heat resistance properties, from the aspect of preventing the problems of foaming and peeling due to moisture absorption, preventing a drop in optical properties and warping of the liquid crystal cell due to differences in thermal expansion, for example, and in turn the ability to fabricate a high-quality liquid crystal display having excellent durability. It is also possible to add fine particles to the adhesive layer so that it exhibits optical dispersion properties, for example (*See Detailed Description of Invention*). With regards to the property limitations that adhesive (A) has a glass transition temperature of not higher than 0°C and a Young's modulus at 23°C of not more than 10 MPa, and that adhesive (B) has a glass transition temperature of not lower than 40°C and a Young's modulus at 23°C of not less than 30 MPa, the Examiner takes the position that such limitations are met by the adhesives taught by Saiki et al. given that those taught by Saiki et al. and the adhesives of the claimed invention have the same chemical composition.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 4 rejected under 35 U.S.C. 103(a) as being unpatentable over Saiki et al. (US 6,747,720 B2) in view of Ushino et al. (US 2007/0003775 A1).

Saiki et al., as discussed above, do not disclose that the retardation films are made of a cycloolefin polymer.

Ushino et al. (In Paragraph No. 0018) discloses a film which is used in a laminated wavelength plate and is a transparent resin film made of a material containing a cyclic olefin based resin, and preferably a film obtained by stretching it. The use of such a film is preferable because the resulting laminated wavelength plate is especially excellent in view of heat resistance and stability of retardation. Also, as the transparent crystal plate having optical anisotropy which is used in the laminated wavelength plate, there are no particular limitations, and the foregoing known materials can be used. However, the use of rock crystal is preferable because the resulting laminated wavelength plate is especially excellent in view of heat resistance and stability of retardation.

Accordingly, it would have been obvious to use a cycloolefin retardation film given that Ushino et al. specifically state that such a film provides the resulting laminated wavelength plate with excellent heat resistance and stability of retardation.

### ***Conclusion***

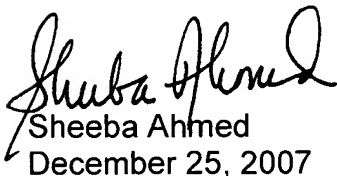

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sheeba Ahmed whose telephone number is (571)272-1504. The examiner can normally be reached on Monday-Friday from 9am to 5pm.

Application/Control Number:  
10/581,201  
Art Unit: 1794
